

CHARACTERISTICS

RH concrete tables are handmade of a custom engineered concrete mix, then finished and sealed using proprietary methods.

- The casting process creates subtle color variations and mottling of the concrete; no two items will be exactly alike.
- Concrete may exhibit spotting and hairline cracks due to exposure to the elements and expansion and contraction; scratches will appear due to usage.
- Our concrete tables are sealed, but due to the natural porosity of the concrete top, tables are not impervious to staining.
- Small surface apertures are the result of the hand finishing process.
- Non-structural hairline cracks can appear on the surface due to age and exposure to elements. These do not affect the structural integrity of the tabletop.
- With sun exposure, the concrete tabletop will fade in color.

CARE & MAINTENANCE

We recommend using a non-abrasive cleaner like Method® All-Purpose Cleaner.

1. Spray the cleaner across the surface, let it sit for 2-3 minutes, then wipe down with a sponge or towel.
2. For added protection and polishing, we recommend using carnauba wax (such as Trewax® Clear Paste Wax) every 2-5 months.

To apply:

- a. Dampen a clean sponge or a soft, clean cotton cloth with water and wring out completely.
 - b. Working in small sections, apply a thin layer of wax in circular motions.
 - c. Remove the excess wax immediately with a dry cloth in the same circular motion; buffing works the wax into the natural material.
 - d. Move to the next section, overlapping the last application slightly.
3. Concrete fabricators can professionally reseal the surface if needed.

RECOMMENDATIONS

- To prevent scratches, do not place or drag sharp or coarse objects across the surface.
- Avoid contact with acidic substances such as citrus or olive oil, which can damage the sealant.
- We do not advise the use of most natural cleaners, as the cleaning agent is typically highly acidic and can damage the table's surface. Citrus-based cleaners should not be used.
- Do not use any cleaning products that contain acetone or denatured alcohol.
- Do not use any heavy abrasive, bleach-based or ammoniated cleansers.
- Do not place extremely hot pans, dishes or glasses directly onto the tabletop, as this can cause sealer discoloration and rings.
- We recommend always using placemats or coasters.
- Use felt pads on the bottom of objects that will remain on the tabletop for long periods. This is especially important with natural stone materials or items that contain moisture; residual moisture can transfer to the concrete and cause discoloration.
- Wipe up spills quickly to avoid staining.
- Our outdoor furniture covers will help protect the table from the elements.
