Restoration Hardware Balance Pressure Tub /Shower Set Specification Diagram

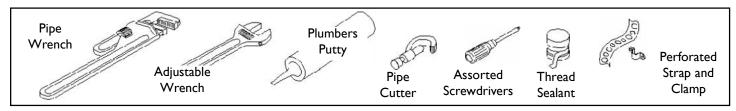

SPECIFICATIONS Min. Operating pressure. Max. Operating pressure: Max. Burst pressure: Max. Burst pressure: Max. Hot water temp: Max. Hot water temp: Solve 1802 [8023] Flow rate in USGPM [//min] @ 50 psi [345 KPa].

All Threaded Connections are ¹/₂" NPT Dimensions are in Inches and Approximation of a Typical Installation

2

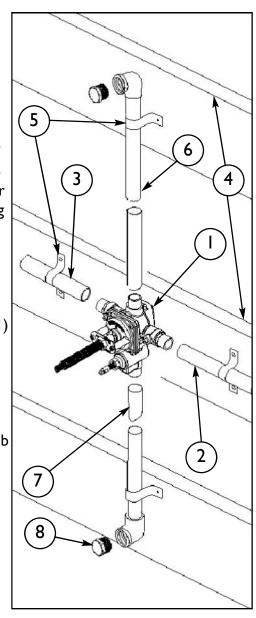

Common tools needed:

Installation Instructions

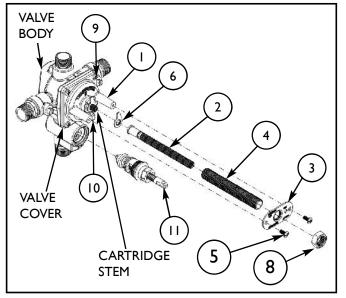

We Recommend Installation by a Licensed Plumbing ProfessionalValve Assembly

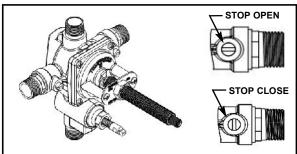

- Position and locate VALVE (I) as shown in Figure 1 and Specification Diagram on page 2.
- Connect Hot (3) & Cold (2) water supply to 1/2 NPT side inlets.
- Apply thread sealant to the supply fittings and firmly tighten into VALVE (I) inlets. Under normal soldering conditions the removal of check valves and mixing cartridge is not necessary; however, if brazing and / or induction heating is used removal is required. Whenever possible, it is best to perform all solder/brazing operations on piping prior to attachment to VALVE (I).
- VALVE (I) and / or SUPPLY (2,3) must be secured to CROSS BRACE (4) using PERFORATED STRAP (5) or equivalent.
- Apply thread sealant to SHOWER RISER (6) and attach to VALVE (1) shower outlet port.
- Secure SHOWER RISER (6) to CROSS MEMBER (4) using PERFO-RATED STRAP (5) or equivalent.
- Apply thread sealant to TUB SUPPLY (7) and attach to VALVE (I) tub outlet port.
- Secure TUB SUPPLY (7) to CROSS MEMBER (4) using PERFORAT-ED STRAP (5) or equivalent.
- Apply PLUG (8) for test. Turn on both water supplies to valve and check for leaks. Note: Water pressure *must* be applied to both hot and cold inlet ports for proper valve operation.
- Turn on water supply and check for leaks.
- After inspection turn off water supply.

2. Setting The Temperature Limit Stop

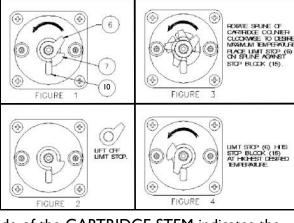

- Remove the HEX NUT (8), all-thread NIPPLE (4), RETAINING SCREWS (5) RETAINING PLATE (3) and STEM (2) from the VALVE COVER.
- Remove the LIMIT STOP (6) see figure 2. Do not remove the MECHANICAL STOP (7). (If for any reason the MECHANICAL STOP (7) is removed refer to Cartridge Removal and Replace section below.) From the CLOSED position, rotate the CARTRIDGE STEM counter-clockwise until the desired temperature is achieved.
- Place the LIMIT STOP (6) on the CARTRIDGE STEM against the STOP BLOCK (10) located on VALVE COVER. Rotate the CARTRIDGE STEM several times to make sure the stop is at the desired temperature setting.
- Replace the STEM (2), RETAINING PLATE (3), RETAINING SCREWS (5) and all-thread NIPPLE(4) onto VALVE COVER. (NOTE: For stem to be fully seated into cartridge stem, all-thread nipple and Hex nut must be tightly secured against retaining plate.)
- Proceed to the VALVE TRIM INSTALLATION.

2a. Cartridge Removal And Replacement

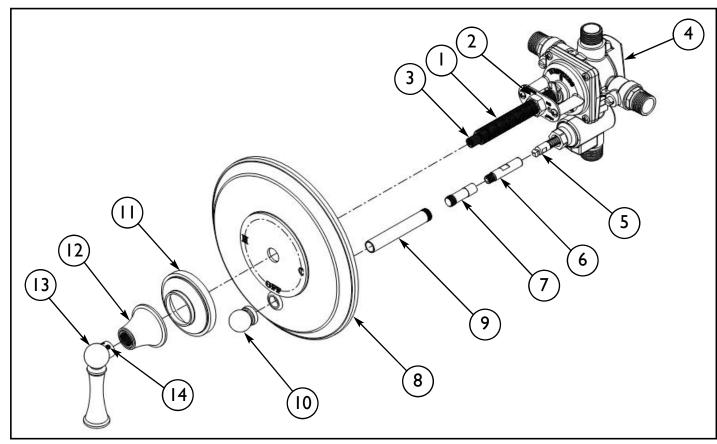

- Remove the HEX NUT (8), all-thread NIPPLE (4), RETAIN-ING SCREWS (5), RETAINING PLATE (3) and STEM (2) from the VALVE COVER.
- Remove the LIMIT STOP (6) and MECHANICAL STOP (7) Remove the COVER SCREWS (9), VALVE COVER and cover O-RING (Not shown).
- Carefully slide the CARTRIDGE STEM out of VALVE BODY. (If filter removal is necessary refer to Cleaning the Filter described in Trouble Shooting Section.)
- Replace CARTRIDGE STEM ensuring that the cartridge's O-RINGS (Not shown) are in place and lubricated with plumbers (non-petroleum) grease. The "H" and "C" on the side of the CARTRIDGE STEM indicates the cartridges proper orientation to the appropriate inlet supply line.
- Once the CARTRIDGE STEM is installed, it is very important to confirm that the cartridges front tabs are correctly locked into the VALVE BODY mating hole.
- Replace the cover O-RING(Not shown), VALVE COVER and tighten COVER SCREWS (9) firmly intoplace.
- To set the MECHANICAL STOP (7) rotate clockwise the CARTRIDGE STEM until it stops.
 Warning: <u>Do not</u> forcefully rotate stem closed.
- Place the MECHANICAL STOP (7) onto CARTRIDGE STEM (10) as shown in figure 1.
- Replace LIMIT STOP (6) as described above in **Setting the Temperature Limit Stop**.
- 4 Technical support: I-866-417-5207 Customer Service: I-877-747-4671 RH-5520 REV C

3. Valve Trim Installation

(Perform these steps after finished wall has been completed)

- The STEM (3) must be trimmed to 3-9/16" from finished wall. Remove STEM (3) by loosening NUT (2) and removing NIPPLE (1), NUT (2) and STEM (3). Trim STEM (3) to previously mentioned dimension.
- The NIPPLE (1) must be trimmed 1" less than STEM (3).
- Fasten STEM (3) and NIPPLE (1) onto VALVE (4). Use NUT (2) to lock NIPPLE (1) into place. Rotate STEM (3) to ensure there is no binding. If binding, loosen NIPPLE (1) until STEM (3) moves freely and does not wobble.
- Place diverter trim LINK (6) and POST (7) onto valve's DIVERTER(5).
- Tighten diverter trim SLEEVE (9) onto DIVERTER (5).
- Align cover PLATE (8) and slide onto valve NIPPLE (1) and diverter SLEEVE (9). (Soapy water will improve sliding of rubber seal onto diverter sleeve.)
- Place ESCUTCHEON(11) and BONNET (12) onto NIPPLE (1) and firmly tighten BONNET (12) in place to secure trim onto VALVE (4).
- Tighten diverter KNOB (10) onto POST (7).
- Secure HANDLE (13) into place by tightening SETSCREWS (14) with wrench provided.
 Note: Allow minimal spacing between HANDLE (13) and BONNET (12).

RH-5520 REV C

4. Tub Spout Installation

Based on finished wall thickness select appropriate size I/2" NPT NIPPLE (2) for SPOUT (I) installation.

Note: NIPPLE (2) is not included.

- Apply thread sealant to both ends of NIPPLE
 (2) and thread into fitting inside finished wall.
- Attach SPOUT (I) to protruding NIPPLE (2) and secure into place.
- Using a thin blade screwdriver, temporarily remove stream STRAIGHTNER (3) from SPOUT (1).

Care and Cleaning

The lustrous finish on your Restoration Hardware Bathware fixture should be treated with care. Improper handling or cleaning can damage the surface of any metal finish. Use a soft cloth to wipe clean. Avoid harsh abrasive cleaner. Water contains lime and other mineral deposits that will be left on the surface after the water has evaporated. You can prevent these deposits from forming by always wiping the fixture dry immediately after use.

Technical Support and Customer Service

For technical support in the installation of your Restoration Hardware Bathware fixture, please call 1-866-417-5207 weekdays between the hours of 7:00am and 4:00pm PST.

For other questions regarding your order, to order additional components of the Restoration Hardware Bathware Collection, to order replacement parts, or to address warranty issues, please contact Restoration Hardware Customer Service at 1-877-747-4671.
