

MEASURING FOR CUSTOM RIPPLE-FOLD DRAPERY AND TRACK HARDWARE

This guide explains how to determine the correct ordering measurements for RH custom Ripple-Fold drapery and corresponding track hardware. Ripple-Fold drapery is designed exclusively for use with a custom track (sold separately) that may be wall or ceiling mounted. The drapery is designed with fullness built in, so the ordering width you provide should be equivalent to the width you want to cover. Your finished drapery will be built with 1.8 times the measured ordering width for fullness. For example, to cover a 50" span of window, we will use 90" of fabric width so that your drapery will provide generous coverage when closed.

DRAPERY LENGTH MEASUREMENT:

- Measure from where the top of the track will be to where you want the bottom hem of the drapery to be. (See *Track Mount Type [Wall or Ceiling Mount]*, below.) Since the drapery hangs below the track, the height of the track should be deducted from your measurement to obtain your drapery ordering length. See deductions in the table below for each style of custom track hardware. Drapery panels will be made to the exact length you specify.

TRACK HARDWARE HEIGHT (INSTALLED)					
LOGAN TRACK		ESSEX TRACK		STANDARD TRACK	
Wall Mount:* 2 $\frac{5}{8}$ "	Ceiling Mount: 2 $\frac{1}{2}$ "	Wall Mount:* 2 $\frac{1}{4}$ "	Ceiling Mount: 2"	Wall Mount: 1 $\frac{1}{4}$ "	Ceiling Mount: 1 $\frac{1}{8}$ "
*Measured from top of wall-mount bracket to top of drapery. Track is approx. $\frac{1}{2}$ " lower than top of bracket.					

- If you have any questions, please call our Custom Window Team at 888.669.2809.

TRACK HARDWARE WIDTH MEASUREMENT:

- Measure the width of the window or doorway area you wish to cover. Consider extending hardware out from the edges of your window as much as 6"- 12" on each side, when possible, to maximize natural light when the drapery is open. Your custom track will be made to the exact width you specify.
- The number of track splices, brackets and carriers you will receive is based on the track width you specify.
- Our custom Essex track hardware includes finials that extend the width of the hardware, beyond the span of the drapery track. If purchasing Essex hardware, be sure that your space will accommodate the finials. Essex ball finials extend 3 $\frac{7}{8}$ " beyond the track on each end, and Essex end-cap finials extend $\frac{3}{4}$ " beyond the track on each end.

If you have any questions, please call our Custom Window Team at 888.669.2809.

MEASURING TIPS

- We offer complimentary professional design and measure service. Please reach out to the Custom Window Team at 888.669.2809 or by email at customwindows@rh.com
- Custom Ripple-Fold drapery is available in any size up to 260" wide in 1" increments and up to 180" long in $\frac{1}{4}$ " increments.
- Precise measurements are key.
- Use a steel tape measure, measuring to the nearest 1" in width and the nearest $\frac{1}{4}$ " in length.
- Measure each window and doorway individually (note: windows and doors that appear to be the same size often are not).
- Instructions are provided with all of our window hardware for installation on most surfaces.
- If you have any questions at any point in the ordering process, please call our Custom Window Team at 888.669.2809.

DRAPERY WIDTH MEASUREMENT:

- Your drapery width should be the same as the track width; there is no need to add width to ensure fullness. As noted above, the width of your drapery panels will be 1.8 times the track width so that the drapery will provide full, ample coverage when closed.
- Because the number of carriers in your ripple-fold hardware and drapery are determined based on the track width, it is important that you specify the same width for both the track hardware and drapery.
- If you have any questions, please call our Custom Window Team at 888.669.2809.

MEASURING FOR CUSTOM RIPPLE-FOLD DRAPERY AND TRACK HARDWARE

PANEL CONFIGURATION

For each drapery span, you may choose a single panel to cover the entire width, or a pair of equal panels.

You must choose the same panel configuration for both your custom Ripple-Fold drapery and custom track hardware orders so that we can construct them to work together.

Single Panel: One individual panel of fabric, made to cover the entire span of your drapery track.

Choose from:

- Left panel: Drapery closes from left to right. Left edge of drapery is stationary.
- Right panel: Drapery closes from right to left. Right edge of drapery is stationary.
- Center panel: Drapery closes from center to both sides.

Pair: Two equal panels (1 left, 1 right); the total width coverage you specify will be automatically divided in 2.

If you have any questions, please call our Custom Window Team at 888.669.2809.

TRACK MOUNT TYPE (WALL OR CEILING MOUNT)

WALL MOUNT

- Track can be mounted at any height along the wall.
- In rooms with high ceilings, mounting the track lower on the wall allows greater ease of opening and closing drapery.
- Hardware included for installation on most surfaces.

CEILING MOUNT

- Track is mounted to the ceiling.
- Ideal when there is little room between the top of window or door and the ceiling.
- Extending drapery from floor to ceiling creates a seamless, dramatic effect.
- Hardware included for installation on most surfaces.

LABEL THIS WINDOW

Create a label to help identify where your window treatment is to be installed when it arrives. Consider using the name of the room where it will be placed; e.g., "Kitchen" or "Guest Bedroom." **You must enter the same Room and Window Description in both your custom Ripple-Fold drapery and custom track hardware orders so that we can construct them to work together, and to ensure seamless installation.**
